

DOSE PROTECTOR FOR INHALATION DEVICE

Abstract

A dose protector for use in an inhaler comprising a housing (40) defining an airway; a dose of medicament optionally retained in a dose container (20, 30); and covering means (10) for said dose wherein covering means (10) for the dose only opens in response to airflow through and/or pressure drop across the airway in a first direction but not in a second, opposite direction.
